**■ Features**

These are epoch-making solenoid operated directional valves of high pressure, high flow which have been developed incorporating a unique design concept into every part of the valve including the solenoid. With wet type solenoids, these valves ensure the low noise and the long life, moreover, ensure no leakage of oil outside of the valve.

**● Wide Range of Models**

Choose the optimum valve to meet your needs from a large selection available.

The DSG-03 50 design series solenoid operated directional valves are classified into the two basic models.

- Standard type.....Useable at high pressure: 31.5 MPa (4570 PSI) and high flow: 120 L/min. (31.7 U.S.GPM)
- Shockless type.....A noise at spool changeover and a vibration in piping can be reduced to a minimum.

**● Stable Operation**

With a strong magnet and spring force, the valves are tough against contamination and thus ensure a stable operation.

**■ Solenoids****● Solenoid Connectors (DIN connector)**

The solenoid connectors conform to the international standard ISO 4400 (Fluid power systems and components-Three-pin electrical plug connectors-Characteristics and requirements).

**● AC Solenoids**

50 to 60 Hz common service solenoids do not require rewiring when the applied frequency is changed.

**● DC Solenoids (Reputable K-series)**

These DC solenoids have surge absorbers for K-series functions. The three advantages of them are as mentioned below:

1. Since surge voltage can be controlled to a very low figure, electric control devices, such as a computer, can be used without any interference like noise.
2. There being no spark between contacts, the life of the relay becomes longer.
3. Time lag for spool return after de-energisation of the solenoid is very short.

**● R Type Solenoids**

These are rectifier and surge absorber incorporated direct current solenoids which can be used by connecting directly to the AC power source. They have, like other DC solenoids, such advantages that the sound in on-off operation is quite low and the coils are hardly burnt out even if the spool is stuck at the half way of its changeover for contaminant particles etc. Moreover, they can be used almost permanently without being affected by a surge voltage from the outside. Thus, they are the solenoids of high reliability and durability.

**● RQ Type Solenoids**

These are solenoids having the same features as R type solenoids above plus such an additional feature that the time lag for the spool return after de-energisation of the solenoid becomes considerably shortened.

**● Insulation Class of Solenoid Class H**

The products approved by CSA (Canadian Standards Association) and the products conforming to the Low Voltage Directive 73/23/EEC (amended by 93/68/EEC) are also available. For the details, please consult us or your Yuken distributors.

★1. AC solenoid is not available in shockless type.

R or RQ type models with built-in current rectifier is recommended for shockless operation with AC power.

★2. Inrush current in the above table show rms values at maximum stroke.

★3. There are more coil types other than the above. For details, please make inquiries.

The coil type numbers in the shaded column are handled as optional extras. In case these coils are required to be chosen, please confirm the time of delivery with us before ordering.

★ 1. In case of the special two position valve, please refer to page 10 for details.  
 ★ 2. N is not available for RQ-type solenoids.  
 ★ 3. NI is not available for R and RQ-type solenoids.

### Options

#### ● Push Button with Lock Nut

Can be used for manual changeover of spool. The push button can be locked in the pressed condition.

#### ● Plug-in Connector with Solenoid Indicator Light

These are the indicator light incorporated plug-in connector type solenoids. Energisation or de-energisation of the solenoid can be easily identified with the incorporated indicator light.

#### ● M8 Mounting Bolts.

As the mounting bolts, M6 socket head cap screws are used for the standard valves, however, M8 socket head cap screws are also available for supply as optional extras. In case the M8 screws are required, suffix "02" to the design number of both valve and sub-plate model number like below.

(Example)

Valve: DSG-03-3C2-A100-5002

Sub-plate: DSGM-03-4002  
The valve is supplied with 4 pcs. hexagon socket head cap screws M8 × 38 Lg.

### Hydraulic Fluids

#### ● Fluid Types

Any type of hydraulic fluid, listed in the table below can be used.

Petroleum base oils	Use fluids equivalent to ISO VG32 or VG46.
Synthetic fluids	Use phosphate ester or polyol ester fluid. When phosphate ester fluid is used, prefix "F-" to the model number because the special seals (fluororubber) are required to be used.
Water containing fluids	Use water-glycol fluids or W/O emulsion fluids.

Note: For use with hydraulic fluids other than those listed above, please consult your Yuken representatives in advance.

### Recommended Viscosity and Oil Temperatures

Always be sure to use hydraulic fluids within the stipulated conditions shown below:

Viscosity: 15 to 400 mm<sup>2</sup>/s (77 to 1800 SSU), Temperature: -15 to +70°C (5 to 160°F)

### Control of Contamination

Due caution must be paid to maintaining control over contamination of the hydraulic fluids which may otherwise lead to breakdowns and shorten the life of the valve. Please maintain the degree of contamination within NAS 1638-Grade 12. Use 25 μm or finer line filter.

### Instructions

#### ● Mounting Posture

In case No-spring detent type valves are used in the solenoid de-energised state, install the valve in such a way that the axis L-L' becomes horizontal to get the detent effect firmly. For the valve types other than the above, there are no restrictions on the mounting posture.

#### ● Solenoid Energisation

For double solenoid valves do not energise both at the same time as it will result in coils burning out.

#### ● Valve Tank Port

Avoid connecting the valve tank port to a line with possible surge pressure. Piping end of tank line should be submerged in oil.

#### ● Shockless Type

In order to benefit from a shockless operation, it is necessary to fill the tank line with operating oil. Only after the tank line has been filled with operating oil, start the operation of the valve on a regular basis.

#### ● Operating Force for Manual Override Push Pin

Please note that as the back pressure of the tank line rises, the manual override push pin turns hard to operate (see the graph below).

Notes) 1. The relation between the maximum flow in the table above and the voltage (within the serviceable voltage) is as shown below.

(Example)

The maximum flow rate is constant regardless of any voltage variants within the serviceable voltage

31.7	22.2
31.7	17.2

At rated voltage [after temperature rise and saturated]

At minimum serviceable voltage (90% of rated voltage) [after temperature rises and saturated]

2. For the maximum flow rate in P → T of the valves with ★ mark please see page 9.

The valve models with ★ mark are handled as Options. If you choose such valves, check the time of delivery beforehand.

#### ■ Maximum Flow of Centre By-Pass

In valve type 3C3, 3C5 and 3C60, in case where the actuator is put on in between the cylinder ports A and B as illustrated below and where the actuator moves and suspended at its stroke end and where the valve is then shifted to the neutral position in the suspended state of the actuator, the maximum flow rates available are those as shown as the table below regardless of any voltage in the range of serviceable voltage.

### Reverse Mounting of Solenoid

#### Reverse Mounting of Solenoid

In spring offset type, it is a standard configuration that the solenoid is mounted onto the valve in the SOL b position (side). However, in this particular spool-spring arrangement, the mounting of the solenoid onto the valve in the reverse position -SOL a side- is also available. The graphic symbol for this reverse mounting is as shown below. As for the valve type 2B\* A and 2B\* B, please refer to the explanation under the heading of "Valves Using Neutral Position and Side Position" given below.

#### Valves Using Neutral Position and Side Position (Special Two Position Valve)

Besides the use of the standard 2-position valves aforementioned in the "List of Standard Models and Maximum Flow", the 3-position valves also can be used as the 2-position valves using the two of their three positions. In this case, there are two kinds of the valve available. One is the valve using the neutral position and SOL a position (2B\* A) and another is the valve using the neutral position and SOL b position (2B\* B).

- ★ 3. With DC solenoids, polarity is no question.

#### DANGER

- Do not perform wiring while the power is on. Doing so may result in electric shock, burns or death.
- Make the wiring properly. Improper wiring will cause an irregular movement of the machine, resulting in a grave accident.

When making replacement of seals, solenoid assemblies or coils, please do it carefully after reading through the relevant instructions in the Operator's Manual.

\*-DSG-03-\*\*\*-N/50/5090

**WARNING**

Before maintenance or removal, do the following. Failure to do these may cause components to move, causing oil leakage or start of the equipment's power supply, and be sure that serious accidents.

- Electric motors and engines have stopped.
- Return pressure in all hydraulic systems to zero.
